Deposits of raw materials of the rare metals in U. S.
S. R. D. I. Shcherbakov. *Redkie Metalli*, 1938, No. 1,
14-24; *Khim. Referat. Zhur.* 1, No. 11-12, 66(1938).
Characteristics of the deposits of industrial importance of
W, Mo, Nb, Ta, Bi, Ra, U, V, Co, Sb and Hg as well
as the rare earth metals are given. Out of these in the
Ural mountains are found important deposits of W,
Be, V, Nb, Rb and Cs, in the Kazakhstan region of W,
and Mo, and in the Donetskii region of Hg and Sb.

V POISKAX RADIYA (IN SEARCH OF RADIUM). D. I. Shcherbakov. Moscow, Gosgeolizdat, 1941. 132p. (In Russian)			
During 1925 the author led a party prospecting for radioactive ores and mineral deposits in the valley of Fergana and the surrounding mountainous area bordering on China and Afghanistan. He recounts their adventures in a non-technical fashion. The author states that this area was the only major source of radioactive ore within the Soviet Union. The numerous photographs give an excellent picture of the barren, rugged terrain, which greatly resembles the American West. Use of a Schmidt-type α electroscope in the field, distribution of radioactivity in a sample of tyuyamunite ore, and several representative ore locations are included in the illustrations.		2

Physical Geography of Araks Valley

To the shores of the Araks River.

Priroda 41, No. 8, 1952.

Historical geographical description of important features of Armenia: Caucasus, Tbilisi, Yerevan, Arмян Mountains, Ararat, Dzhul'f, Arzna (health resort), Lake Sevan, etc. Emphasizes in text and photographs the mountainous nature of Armenia. Mentions that important factories lie in the outskirts of Yerevan, which belies the predominant agricultural picture afforded by a train trip, such as the author is describing. One of a series of regular descriptions of a part of the USSR.

USSR/ Meteorology - Arctic expeditions

Card 1/1 ; Pub. 124 - 2/24

Authors ; Shcherbakov, D. I., Academician

Title ; First results of the 1954 high-latitude arctic expedition

Periodical ; Vest. AN SSSR 9, 10-16, Sep 1954

Abstract ; The first results of the scientific (meteorological and geographical) high-latitude arctic expedition of 1954 are described. The purpose of this expedition was to establish permanent observation stations on drifting ice and to carry out research of the unknown regions of the Central Arctic and Arctic Sea.

USSR/ Geography - Arctic exploration

Card 1/1 : Pub. 77 - 12/21

Authors : Shcherbakov, D. I., Academician

Title : In the heart of the Arctics

Periodical : Nauka i zhizn' 21/9, 30-32, Sep 1954

Abstract : An account is given of two former arctic expeditions and of the establishing, in 1954, of two stations for arctic exploration. The last is claimed to be the most extensive of all. One of the stations was located at 86° north latitude and 175° 25' west longitude. Studies were made of the drift of the ice, weather, physical features of the earth's crust, animal life and a vast array of other features of the region of interest to various sciences. Illustrations.

USSR/Geology - Mineral resources

Card 1/1 : Pub. 86 - 3/46

Authors : Shcherbakov, D. I., academician

Title : Study of the earth's crust in Soviet Ukraine

Periodical : Priroda, 43/9, 24-33, Sep 1954

Abstract : A description is given of the composition of the earth's crust in the various parts of the Ukraine. The geological processes involved in their formation are explained. An account is given of the research work done by Russian and Ukrainian scientists, particularly, with reference to the location of mineral wealth. Illustrations; map.

USSR/Geography--Arctic explorations

Card 1/1 Pub. 86--9/33

Authors : Shcherbakov, D. I., Academician

Title : In the center of the Arctic region

Periodical : Priroda 43/11, 73--84, Nov 1954

Abstract : The utility of finding a shorter route from the western to the eastern part of the Soviet Union is cited as an important reason for exploring the ocean to the north of the Asiatic continent. An account is given of a flight, made by the author, to islands in that region and the description deals mostly with observations made of the land and ice formations, animal life, weather conditions and personal incidents. One USSR reference (1954). Illustrations; map.

ABSTRACT:

Vladimir Ivanovich Vernadskiy did much for the study of the radioactive rocks, minerals and soils of Russia, and for the study of radioactivity and isotopes in general. The works of V. I. Vernadskiy brought much new information into our knowledge of the aluminosilicates and the phenomena of paragenesis and isomorphism; they helped transform mineralogy from a descriptive to a genetic science, based on the chemistry of the earth's crust; they have furthered the development of such new sciences as geochemistry and biogeochemistry. V. I. Vernadskiy is the author of "Opyt opisatel'noy

TITLE: Soviet Geology During the Past 40 Years (Sovetskaya geologiya za 40 let)

PERIODICAL: Izvestiya Akademii Nauk SSSR, Seriya Geologicheskaya, 1957, # 11, p 3-7 (USSR)

ABSTRACT: The author reviews the achievements made in the USSR in the field of geologic research during the past 40 years. The complete geologic mapping of the entire territory of the USSR must be mentioned as the main achievement during this period. Further advances are the issue of improved geologic and "metallogenic" maps showing the locations of mineral deposits, special maps on oil and coal deposits, showing not only the actual deposits, but also indicating likely deposits, and special tectonic maps. Prospecting geophysics was advanced in the USSR by developing scientific methods, such as magnetometry, gravimetry, seismetry, aerometry, stratigraphy, and isotopic geology. Improved methods of basic drilling, devised in the USSR, have proved very successful in conjunction with geophysical research. New "branches" of geology were developed: the geology of oil, uranium, and coal, Quaternary geology, applied mineralogy and geochemistry, and technical petrography. Regional geologic re-

TITLE: Conquered Natural Resources (Pokorennyye nedra)

PERIODICAL: Nauka i Zhizn', 1957, # 11, pp 23-26 (USSR)

ABSTRACT: In 1956 the output of coal in the Soviet Union amounted to 429 million tons. In addition to the well-known coal deposits of Donbass and Kuzbass new rich coal fields are being opened up, such as the Pechora and Moscow coal fields, the Dnepr, South Urals, Karaganda, Cheremkhovo and Bureya coal deposits. Recently coal has been discovered in Yakutiya in the Far East. In 1956, the Soviet Union produced 83.8 million tons of oil. In addition to the oil center of Baku, new oil fields have been opened up after the October Revolution - the Chusovskiye Gorodki oil fields in the Urals and the Bashkiriya oil fields which equal the Baku center in their output. Furthermore rich oil deposits were discovered in the Ukraine, in south Turkmenistan and other districts of Central Asia, as well as in the Tartar SSR in the Kuybyshev and Chkalov Oblast'. In 1956 the output of gas amounted to 13.7 billion cu m, during the sixth Five-Year Plan the output will reach 60 billion cu m. In 1956 the Soviet Union produced 4.2 million tons of ferrous metals.

Card 1/3

Conquered Natural Resources

25-11-12/28

The fields of the Kursk magnetic anomaly produce especially high-grade iron ore (54-57%). Only the Yakovlevo deposits (in the Belgorod-Oboyansk iron ore field) are twice as large as those of Krivoy Rog. Ten years ago, the Mikhaylovsk deposits were discovered in the northern district of the Kursk magnetic anomaly - 90 km from the town of Kursk. There the construction of big ore-mining installations is planned, which will produce 5-6 million tons of high-grade iron ore in the next few years. High-grade iron ore has as well been found in the Gostishchevo deposits. Vast iron ore deposits have been explored in Siberia on the river banks of the Angara. Deposits of 100 million tons of iron ore have been discovered in Yakutiya. The Sokolovo-Sarbay iron ore deposits are of such importance that an ore-concentrating combine is under construction near the new city of Rudnyy, Kustanay Oblast'. Rich deposits of copper ore have recently been discovered in the Chita Oblast'. The recent discovery of nepheline deposits in the Yenisey river area near the Yenisey hydro-electric power plant will help to develop a highly productive aluminum industry.

The mining industry on the Kola peninsula owes its development to the Soviet geologist A.Ye.Fersman.. There are vast deposits

possible to utilize solar energy.

The French journalist Jean Verdier thinks that a great scientific discovery will be the utilization of catalysis enabling to convert one element into another, as for example get gasoline out of poor coal and water, etc.

B. Rubashev, Acting Learned Secretary of the Main Astronomical Observatory, thinks that by the end of this century it will be possible to obtain synthetic albumen and raise live cells, thus solving the mystery of the origin of life.

Engineer S. Grigor'yev considers that the greatest achievement of Soviet science will be a new sun in an artificial magnetic field above the Arctic which will melt the eternal ice and change the climate of the Globe.

A.A. Saukov, associate member of the USSR Academy of Sciences, hopes that sufficient electric power will be available after 40 years to obtain ore from mountain rocks as the present deposits will be exhausted.

Engineer M. Vasil'yev considers the most striking discovery of 1997 the device for electrical sleep which would reduce sleep to 2 hours per day without detriment to the human organism.

Professor N. Pomazovich describes the creation of diamonds

TITLE: The Menu of Mankind (Menu chelovechestva)

PERIODICAL: Znaniye - Sila, 1957, # 11, p 35-40 (USSR)

ABSTRACT: In connection with the 40th anniversary of the October Revolution the editor has obtained the opinion of authors, journalists, etc., how the food problem would be solved in 40 years and what new sources of nutrition would be available to mankind. Academician D.I. Shcherbakov is convinced that towards the end of the 20th century the question of obtaining synthetic albumen on an industrial scale will be solved. The writer Yu. Dolgushin thinks that food will be made of the same components as used by the green leaves of plants, i.e. air, water and salts; only the sun rays will be substituted by atomic energy. This will enable to replace agriculture by automated factories where albumen, carbohydrates and fats will be produced without the influence of sun and weather. The author I. Nechayev describes the future manufacture of carbohydrates, fats, yeast, fungi, flavors etc. D. Kershner depicts a dinner table conversation of 1997 about vegetables of former and present times. Journalist S. Vladimirov writes about the great extent the cultivation of seaweeds has reached, and the big crops of high-

TITLE: Lines of Development in Geology in the USSR (Puti razvitiya geologii v SSSR)

PERIODICAL: Priroda, 1957, # 11, p 49-60 (USSR)

ABSTRACT: The author acquaints the reader with terms and methods of research used in geology and then draws a picture of the development geology has undergone during 40 years of Communist regime. In 1913 the most important geological establishment in Russia employed 50 specialists, while the total of geologists and geophysicists at present surpasses 40,000. Geology as a science is now broken down into numerous branches: as geology of the sea, of crude oil, coal uranium etc. The geological map is the basis of all practical activities and scientific conclusions. The latest "Geological Map of the Soviet Union" was printed in 1956, showing the geological structure of the entire country now explored in its basic features. Great achievements were made by Soviet scientists in establishing the mineral sources in their country. While in 1937 coal deposits were still estimated at 1,654 billion tons, the figure rose to 8,500 billion tons within the next 20 years. As to the production of crude oil,

 Scientists on Science and Engineering of the Future) [Moscow]
 Izd-vo Sovetskaya Rossiya, 1958. 243 p. 50,000 copies printed.

Ed.: V. A. Golubkova; Tech. Ed.: G. I. Kleyeva.

PURPOSE: This book is intended for the general reader.

COVERAGE: The book contains 27 articles (told reporters by
 Soviet scientists) dealing with probable future problems in
 physics, chemistry, electricity, metallurgy, engineering,
 mining, medicine, biology, agriculture, ecology, transportation,
 exploration of space, and photography. Attention is given to
 automation, scientific underground, modification of coal, use of
 new metals, modernization of oil fields, atomic electric stations,
 production of metal parts by the process of explosion, explosions

 of the future, moving pavements, wheelless and driverless auto-
 mobiles, electric cars, the industrialization of Siberia,
 use of underground heat, climate control, living on the moon,
 antimatter, and photon ju Names of the interviewed scientists
 are given. There are 11 forewords.

TABLE OF CONTENTS:

INTRODUCTION

Mission Into the Future
 Card-2/7

5

Reports From the Twenty-First (Cont.)

SOV/5494

Learn to Dream [A. N. Mamonov, Academician]

10

THE FUNDAMENTAL AND MOST IMPORTANT THINGS

Transformation of Elements -- the Future of Metallurgy [I. P.
 Bardin, Academician, Vice-President, AS USSR]

25

Mines Are Breathing Their Last [I. S. Garkusha, Director of
 Vsesoyuznyy nauchno-issledovatel'skiy institut "Poleznye" --
 All-Union Scientific Research Institute of Underground Exploita-
 tion of Coal -- and N. A. Fedorov, Deputy Director for the
 Scientific Section]

34

Automatic Oil Field [S. I. Mironov, Academician, and M. A.
 Kapelyushnikov, Corresponding Member, AS USSR]

45

From the Sources [A. V. Vinter, Academician]

51

Card 3/7

Reports From the Twenty-First (Cont.)	SOV/5494	
proizvodstvennykh sil -- Council for the Study of Productive Forces]		191
MASTERS OF THE PLANET		
Geographers Will Remake Nature [D. I. Shcherbakov, Academician]		207
Pulse of the Tatar Strait [N. G. Romanov, Engineer]		213
Predicting Space Travels [Yu. S. Khlebtsevich, Candidate of Technical Sciences]		223
In a Lunar City [N. A. Varvarov, Engineer, Chairman of the Astronomic Section of DOSAAF]		233
Through Interstellar Abysses [K. P. Stanyukovich, Professor]		237
[Epilogue]		[243]
AVAILABLE: Library of Congress

OBRUCHEV, Vladimir Afanas'yevich, akademik; OBRUCHEV, S.V., otvetstvennyy red.; SHCHERBAKOV, D.I., akademik, red.; SHATSKIY, N.S., akademik, red.; OBRUCHEV, V.V., kand. geol.-min. nauk, red.; SINITSYN, V.M., doktor geol.-min. nauk, red.; POPOVA, T.S., red. izd-va; PRUSAKOVA, T.A., tekhn. red.

[Selected works] Izbrannye trudy. Moskva, Izd-vo Akad. nauk SSSR.
Vol.1. 1958. 477 p. (MIRA 11:9)

1. Chlen-korrespondent Akademii nauk SSSR (for Obruchev, S.V.).
(Asia, Central--Geology)

BARDIN, I.P., akademik, otv.red.; STRUMILIN, S.G., akademik, red.; SHENYAKOV, L.D., akademik, red.; SHCHERBAKOV, D.I., akademik, red.; ANTIPOV, M.I., red.; BELYANCHIKOV, K.P., red.; BRODSKIY, V.B., red.; YEROFEEV, B.N., red.; LIBERMAN, A.Ya., red.; MELESHKIN, S.M., red.; ORLOV, I.V., red.; SMIRNOV-VERIN, S.S., red.; RIKMAN, V.V., red.; SAMARIN, A.M., red.; SLEDZYUK, P.Ye., red.; SKOBNIKOV, M.L., red.; SOKOLOV, G.A., red.; FREY, V.I., red.; KHLEBNIKOV, V.B., red.; SHAPIRO, I.S., red.; SHIRYAYEV, P.A., red.; KUDASHEV, A.I., red.izd-va; KUZ'MIN, I.F., tekhn.red.

[Magnetite ores of the Kustanay Province and their exploitation]
Magnetitovye rudy Kustanaiskoi oblasti i puti ikh ispol'zovaniya.
Otvatstvennyi red. I.P. Bardin. Moskva, Izd-vo Akad. nauk SSSR,
1958. 489 p. (Zhelezorudnye mestorozhdeniya SSSR). (MIRA 12:2)

1. Russia (1923- U.S.S.R.) Ministerstvo geologii i okhrany neдр.
(Kustanay Province--Magnetite)

SHATSKIY, N.S., akademik, otv.red.; SHCHERBAKOV, D.I., akademik, red.;
BELYAYEVSKIY, N.A., red.; DOLGOPOLOV, N.N., red.; LEVITSKIY,
O.D., red.; PUSHCHAROVSKIY, Yu.M., red.; SOKOLOV, G.A., red.;
NOSOV, G.I., red.izd-va; GUSEVA, I.N., tekhn.red.

[Characteristics of the distribution of mineral resources] Zakono-
mernosti razmeshcheniya poleznykh iskopaemykh. Vol.1. Moskva,
1958. 532 p. (MIRA 12:3)

1. Akademiya nauk SSSR. Komissiya po probleme "Zakonomernosti
razmeshcheniya poleznykh iskopayemykh."
(Mines and mineral resources)

FERSMAN, Aleksandr Yevgen'yevich, akademik; SHCHERBAKOV, D.I., akademik, otvetstvennyy red.; KAPUSTINSKIY, A.F., red.; LEBEDEV, V.I., doktor geol.-min.nauk, red.; SAUKOV, A.A., red.; SHCHERBINA, V.V., doktor geol.-min.nauk, red.; KUN, N.R., red.izd-va; MOSKVICHEVA, N.I., tekhn.red.

[Selected works] Izbrannye trudy. Moskva, Izd-vo Akad. nauk SSSR.
Vol.4. 1958. 588 p. (MIRA 11:4)

1. Chlen-korrespondent AN SSSR (for Kapustinskiy, Saukov)
(Geochemistry)

SHCHERBAKOV, D.I., akademik

To the editor of "Nauchnye doklady vysshei shkoly." Nauch.dokl.vys.
shkoly; geol.-geog.nauki no.1:5 '58. (MIRA 12:2)

1. Akademik-sekretar' Otdeleniya Geologo-geograficheskikh nauk AN
SSSR.
